uni pin MANGA SHŌJO

Uni Pin felt tips are perfect for adding ink to your MANGA sketch boards thanks to their constant ink flow which produces perfectly consistent lines. They will cover the pencil sketch which, once erased, will leave a clean, sharp and permanent line.

In general, the edges are drawn using thick lines and the details use finer lines to make your characters' silhouettes stand out.

The different tip sizes can be selected depending on the thickness of the line you require as well as the character you want to give to each line.

The calibrated tips are particularly well suited to fine and precise lines.

The brush tips will allow you to draw more fluid lines with a variety of creative styles depending on the pressure applied to the tip. By applying greater pressure, you will have wider lines (broad strokes), and less pressure will give you finer lines (fine strokes). The dark grey shade is ideal to express depth. The extra-fine brush tip, which offers even greater finesse and flexibility, is particularly well suited to very delicate lines with character, moving from extremely fine through to wider lines.

DIFFERENT TIP SIZES TO MEET EVERY NEED

- Calibrated tip 0,03 mm : Perfect for details and precision lines as well as facial features.
- Calibrated tip 0,1 mm : Ideal for drawing the outline of boxes, bubbles and frames.
- Calibrated tip 0,5 mm : Ideal for thicker lines and outer edges.
- Extra-fine black brush tip : Ideal for very delicate lines.
- Dark grey brush tip : For shading, fluid lines and shadows.

ARTIST'S ADVICE

Gaëlle Autin

“

First use a graphite pencil or UNI PREMIUM MECHANICAL PENCIL to sketch your designs. Then add ink to the main subject and foreground details. Finish off with the background and fine details.
